

BIOPURE™

# Quality Control Materials

Romer Labs offers a range of quality control materials (QCM) for most of the regulated mycotoxins in different contamination levels and matrices.

## What are Biopure™ Quality Control Materials?

Romer Labs provides Quality Control Materials (QCM) in various matrices and contamination levels for most of the regulated mycotoxins. QCM for Aflatoxin, Deoxynivalenol, Fumonisin and Zearalenone as well as Multitoxin QCM are available.

QCM are naturally contaminated materials with a Romer Labs in-house characterization by an ISO 17025 accredited LC-MS/MS method. Certificates of analysis are provided with each batch.

QCM can be used for validating methods, periodical accuracy checks of accredited analytical methods and as positive control materials in different assays.

## Characteristics

- Homogeneity tested
- Stability tested
- 3 different contamination levels (low, mid, high) based on EU regulations

## PRODUCT FEATURES

- Effective quality control tool
- Stability & homogeneity tested materials
- State-of-the-art characterized materials
- Sample consistency through robust packaging
- Useful for periodical accuracy checks of analytical methods

# Quality Control Materials

All materials are packaged into stable amber plastic bottles with a tamper-proof cap in amounts of **100 g** each.
