

BIOPURE™

# Fully stable <sup>13</sup>C isotope labeled calibrants

Biopure™ fully stable <sup>13</sup>C isotope labeled calibrants are unique and rely on a patented technology, proprietary to Romer Labs. They play a pivotal role in LC-MS/MS analysis and are widely used in multi-analyte methods.

## How Biopure™ fully stable <sup>13</sup>C isotope labeled calibrants work

<sup>13</sup>C isotope labeled Mycotoxins are used as internal standards (ISTD) for mass spectrometry (MS).

All constituting carbon atoms in the molecule are replaced by the stable carbon isotope <sup>13</sup>C. Because of the similar chemical structure of analyte and <sup>13</sup>C analogue these substances behave similar in chromatography but differentiate in MS. Recovery losses from sample preparation and ion suppression or enhancement effects in the MS source can be eliminated.

## Application in LC-MS/MS – Routine Analysis

To keep costs efficient the point of internal standard addition of the sample into the MS system is crucial. Depending on sensitivity of the MS system used and influences to correct ISTD can be added into the analytical sample, prior to cleanup or prior to injection into the MS system.

## PRODUCT FEATURES

- Correct matrix effects
- Fully labeled calibrants show an optimum mass unit difference between analyte and IS – no interference
- Results with high accuracy and precision
- <sup>13</sup>C fully labeled IS advantage – no isotope effect
- State-of-the-art technology
