

RapidChek®

Listeria NextDay™

The RapidChek® *Listeria* NextDay™ detects all species of *Listeria* for a complete solution for environmental monitoring programs, delivering accurate results.

How the test works

The RapidChek® *Listeria* NextDay™ technology couples a sensitive immune-detection strip with a single proprietary enrichment media for fast and accurate *Listeria* species results within 27 – 40 hours. The immune-detection strip employs a unique combination of proprietary *Listeria* antibodies and a colloidal gold conjugate coated on the surface of a membrane.

After enrichment, the sample is transferred into a provided test tube and heated for 5 minutes. The immuno-detection strip is then added directly into the sample and within 10 minutes results are read. One line indicates a negative result and two lines indicate a positive result. The test kits are stored at room temperature.

Applications

The RapidChek® *Listeria* NextDay™ method is designed to detect *Listeria* spp. on environmental surfaces. The test kit permits the presumptive detection and identification of the target pathogen by a one step process in 27 – 40 hours.

Validations

RapidChek® *Listeria* NextDay™ is Health Canada approved (MFLP-104) for use on various environmental samples (stainless steel, sealed concrete, rubber, ceramic and plastic).

Confirmation

Presumptive positive results must be confirmed by a cultural reference method (such as MFHPB-30, USDA MLG or FDA BAM). Enriched RapidChek® *Listeria* NextDay™ media samples used in the test procedure prior to boiling can be used for confirmation.

Features and Benefits

Fast & simple procedure

- Next day results
- Simplified media preparation
- Minimal training
- No additional equipment

Easy resource management

- High scalability
- Kit storage at room temperature
- Long shelf life

Reliable results

- Health Canada and AOAC approved

RapidChek®

Listeria Next Day™

Carefully read the package insert before performing any test.

Enrichment

1 One Media, One Transfer Step

Rehydrate media and autoclave.

Incubate for 27 – 40 hours.

Transfer sample to a supplied test tube.

Assay

2 Simple Procedure, Simple Interpretation

Heat the samples for 5 minutes.

Let the strip develop for 10 minutes (max. 20 minutes).

1 Line = Negative
2 Lines = Positive

Ordering Information

| Item | Description | Item No. |
|-------------|--|----------|
| Test Strips | 45 Tests - Enrichment media not included | 10001695 |
| Media | Enrichment Media: 500 g | 10001409 |

Also available:
